

GRF2584

High Gain Low Noise Amplifier

Tunable Range 3 to 9 GHz

RELEASE Ø DATA SHEET

FEATURES

- Gain Levels Up to 36.5 dB
- Noise Figure Levels as Low as 1 dB
- Excellent Linearity Performance
- Supports Tuning Over Wide Bands
- 2.7 to 6 V Supply Voltage
- Flexible Biasing Provides Latitude for Linearity Optimization
- 50 mA Native Mode Quiescent Current Consumption
- 50 Ω Single-Ended Input and Output Impedances
- RoHS Compliant

Reference: 5 V / 50 mA / 5.9 GHz

- Gain: 32.2 dB
- OP1dB: 16.3 dBm
- OIP3: 29.4 dBm
- Evaluation Board NF: 1.2 dB

APPLICATIONS

- 5G n48, n77, n78 & n79 Massive MIMO Base Stations
- Automotive V2X Band n47 Front Ends and Compensators
- High-Performance RF Infrastructure
- 5G Bands n96 n102 n104

DESCRIPTION

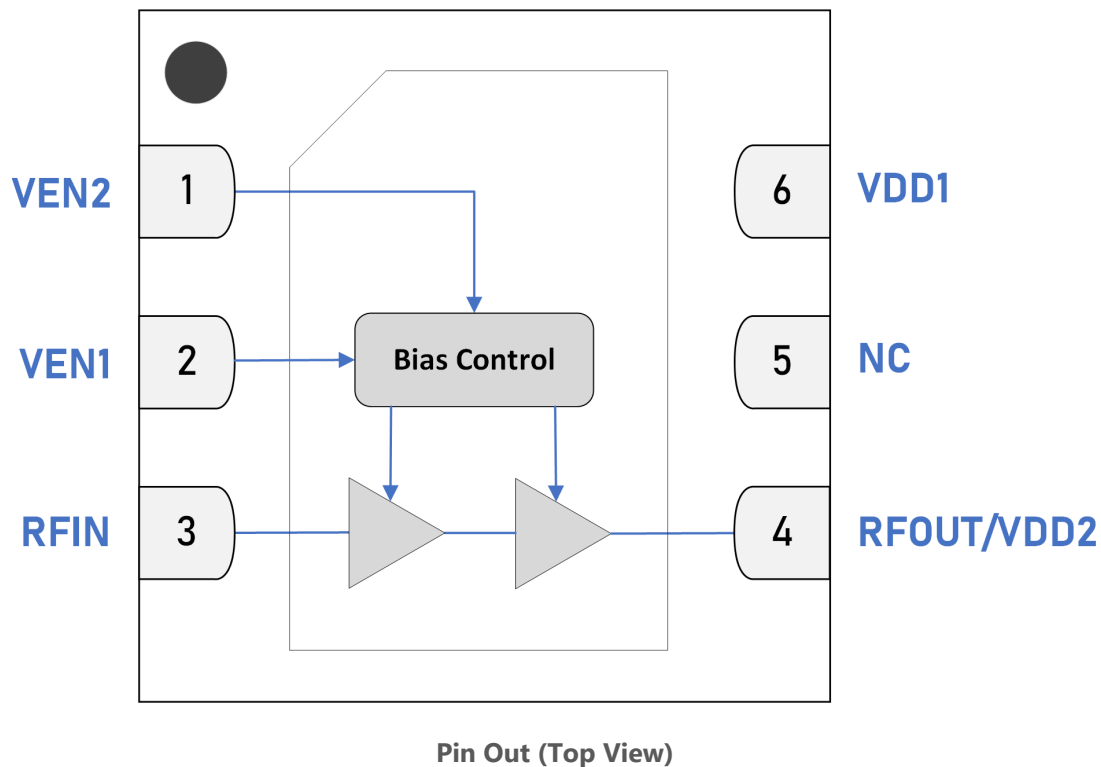

The GRF2584 is a two-stage GaAs pHEMT low noise amplifier targeting high-performance wireless infrastructure applications. The device can be tuned to operate over narrow or wide bandwidths over a range of 3 to 9 GHz while delivering up to 36 dB of gain and noise figures as low as 1 dB.

For optimal efficiency and linearity, the amplifier was designed to operate with a single 5 V supply voltage while using only 50 mA of quiescent current. Supply voltages ranging from 2.7 to 6 V are also supported. Similarly, I_{DDQ} can be increased beyond the native biasing point for enhanced linearity performance.

Additional tunes can be found on the GRF2584 “Custom Tunes” product page: [GRF2584 Custom Tunes](#)

BLOCK DIAGRAM

Pin Assignments

Pin	Name	Description	Note
1	VEN2	2nd Stage Enable	$VEN2 \leq 0.2$ volts disables the second stage. VEN2 and external series resistor controls the second stage I_{DDQ} when VEN2 is high.
2	VEN1	1st Stage Enable	$VEN1 \leq 0.2$ volts disables the first stage. VEN1 and external series resistor controls the first stage I_{DDQ} when VEN1 is high.
3	RFIN	RF Input	Internally matched 50 Ω . An external DC blocking cap must be used.
4	RFOUT/VDD2	RF Output/2nd Stage Bias	Internally matched 50 Ω . V_{DD} must be applied through a choke to this pin.
5	NC	No Connect	No internal connection. This pin can be left unconnected, or be connected to the ground (recommended). Use a via as close to the pin as possible if grounded.
6	VDD1	1st Stage Bias	Pull up to V_{DD} through the inductor and use bypass capacitors as close to the pin as possible. In addition to supplying the first stage of the device with a DC voltage, there is also an RF signal present.
PKG BASE	GND	Ground	Provides DC and RF ground for amplifiers, as well as thermal heat sink. In order to match the devices rated performance, it is strongly recommended to use multiple 8 mil vias beneath the package for optimal RF and thermal performance. Refer to evaluation board top layer graphic on schematic page.

Tape and Reel Information

Guerrilla RF's tape and reel specification complies with Electronics Industries Association (EIA) standards for "Embossed Carrier Tape of Surface Mount Components for Automatic Handling" (reference EIA-481). Devices are loaded with pins down into the carrier pocket with protective cover tape and reeled onto a plastic reel. Each reel is packaged in a cardboard box. There are product labels on the reel, the protective ESD bag, and the outside surface of the box. For the latest reel specifications and package information (including units/reel), please visit [Package Manufacturing Information](#) | [Guerrilla RF](#) (guerrilla-rf.com).

March 6, 2025	Changed Max Channel Temperature from TBD to 170 °C.

Data Sheet Classifications

Data Sheet Status	Notes
Advance	S-parameter and NF data based on EM simulations for the fully packaged device using foundry-supplied transistor S-parameters. Linearity estimates based on device size, bias condition and experience with related devices.
Preliminary	All data based on evaluation board measurements taken within the Guerrilla RF Applications Lab. Any MIN/MAX limits represented within the data sheet are based solely on <i>estimated</i> part-to-part variations and process spreads. All parametric values are subject to change pending the collection of additional data.
Release Ø	All data based on measurements taken with <i>production-released</i> material. TYP values are based on a combination of ATE and bench-level measurements, with MIN/MAX limits defined using <i>modelled estimates</i> that account for part-to-part variations and expected process spreads. Although unlikely, future refinements to the TYP/MIN/MAX values may be in order as multiple lots are processed through the factory.
Release A-Z	All data based on measurements taken with production-released material <i>derived from multiple lots which have been fabricated over an extended period of time</i> . MIN/MAX limits may be refined over previous releases as more statistically significant data is collected to account for process spreads.
